Safety notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application. Unauthorised modifications are prohibited. The product must not be used in relation with any equipment that in case of a failure may threaten humans, animals or assets.

Ensure all power is disconnected before installing. Do not connect to live/operating equipment.

Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Remarks

- Automated zero-point calibration (Auto Zero)** Transmitters equipped with the auto-zero calibration are maintenance-free.
- The auto-zero calibration electronically adjusts the transmitter zero every 10 minutes. The function eliminates all output signal drift due to thermal, electronic or mechanical effects. The auto-zero adjustment takes approx. 4 seconds after which the device returns to its normal measuring mode. During the 4 second adjustment period, the output and display values will freeze to the latest measured value.
- Manual zero-point calibration** After initial commissioning
- To carry out the zero-point calibration, the device must be connected to the power supply at least 15 minutes beforehand.
- Calibration interval
- ≤250 Pa 3 months
 - ≤500 Pa 6 months
 - >500 Pa 12 months
- Procedure
- Release both tube connectors from the pressure ports + and -
- (Carry out the manual zero-point calibration even if the display shows 0.)
- Press the button "Manual zero-point calibration" until the LED lights permanently
 - Wait until the LED flashes again and reinstall the tube connectors to the pressure ports (pay attention to + and -)

Indicators

- Indicators** Depending on the device and the number of measured values, the display automatically scales. Parameters, such as the fading in/out of measured values, brightness and traffic light function, are changed via the app or bus system. During the boot process, the software and hardware versions are displayed.

- 1 Fault / sensor failure
- 2 Service / visual inspection due
- 3 TLF (traffic light function) active (thresholds for display colour changes)
- 4 Radio active (not available)
- 5 Status bar
- 6 Measured value (* appears when TLF function is activated for this value)
- 7 Unit of measure
- 8 Measured value

 - Connect Bluetooth-capable smartphone with Bluetooth dongle
 - Select configuration in the Belimo Duct Sensor Assistant App

Wiring diagram

When switching from 0...10 V to 0...5 V output voltage also the current will be adjusted from 4...20 mA to 4...12 mA.

Wiring diagram

Wiring note power supply AC

For the sensor to function properly, polarity must be observed with a DC supply as well as an AC supply.

If the AC supply is connected incorrectly, i.e. if the wires are reversed, this can lead to the destruction of the sensor.
