

Flow sensor

- Ultrasonic flow sensor for closed cold and hot water systems containing water or water-glycol mixtures. It continuously measures the glycol content of the medium and compensates for it to ensure an accurate measurement.
- The flow sensor is installed in the system via two external threads (ISO 228-1). The power supply is AC/DC 24 V and the output signal is 0...10 V or communicative via BACnet MSTP, Modbus RTU or MP-Bus.
- The flow rate can be accumulated.
- Configuration is done with Belimo Assistant 2.

Type Overview

Type	DN	G ["]	FS [l/s]	FS [m³/h]	Kvs theor. [m³/h]	PN
22PF-1UC	15	3/4	0.5	1.8	3.9	25
22PF-1UD	20	1	0.83	3.0	7.2	25
22PF-1UE	25	1 1/4	1.17	4.2	13.2	25
22PF-1UF	32	1 1/2	2.0	7.2	16.0	25
22PF-1UG	40	2	3.33	12	23.6	25
22PF-1UH	50	2 1/2	5.0	18	32.0	25

FS: Full scale, maximum flow

Kvs theor.: theoretical Kvs value for pressure drop calculation

Technical data

Electrical data	Nominal voltage	AC/DC 24 V
	Nominal voltage frequency	50/60 Hz
	Nominal voltage range	AC 19.2...28.8 V / DC 21.6...28.8 V
	Power consumption AC	2.2 VA
	Power consumption DC	1.1 W
	Connection supply	Cable , 6x 0.75 mm²
Data bus communication	Communication	BACnet MS/TP Modbus RTU MP-Bus
	Number of nodes	BACnet / Modbus see interface description MP-Bus max. 8 (16)
Functional data	Medium	Water Water-glycol mixture
	Configuration	via Belimo Assistant 2
	Voltage output	1 x 0...10 V, 0.5...10 V, 2...10 V or user defined
	Analogue output	DC 0...10 V (factory setting), selectable via NFC max. load 1 mA User defined: - Lower limit: 0...8 V - Upper limit: 2...10 V
	Pipe connection	External thread according to ISO 228-1
	Installation orientation	upright to horizontal
	Servicing	maintenance-free

Technical data

Measuring data	Measured values	Flow Temperature
	Measuring fluid	Water, water with glycol up to max. 60% vol.
	Measuring principle	Ultrasonic flow measurement
Specification Flow	Min. flow measurement	0.2% of FS
	Measuring accuracy flow	±2%, according to class 2 EN 1434, glycol 0% vol.
	Measuring accuracy flow note	@ 15...120°C Inlet section ≥0x DN (EN 1434-4:2022) Additional information on measuring accuracy (with diagram) can be found in the section "Measuring accuracy".
Glycol monitoring	Measurement display glycol	0...60%
	Measuring accuracy glycol monitoring	±4%
Safety data	Protection class IEC/EN	III, Protective Extra-Low Voltage (PELV)
	Degree of protection IEC/EN	IP54
	Degree of protection NEMA/UL	NEMA 2
	EMC	CE according to 2014/30/EU
	Certification IEC/EN	IEC/EN 60730-1:11 and IEC/EN 60730-2-15:10
	Quality Standard	ISO 9001
	Type of action	Type 1
	Rated impulse voltage supply	0.8 kV
	Pollution degree	3
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	-30...55°C [-22...131°F]
	Fluid temperature	-20...120°C [-4...248°F]
	Fluid temperature note	At a fluid temperature of <2°C [<36°F], frost protection must be guaranteed
	Storage temperature	-40...80°C [-40...176°F]
Materials	Cable	PVC
	Fluid wetted parts	Brass nickel-plated, Brass, Stainless steel, Aramid fibre, PEEK, EPDM
	Flow measuring pipe	Nickel-plated brass body

Safety notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.

Outdoor application: Only possible if no (sea) water, snow, ice, sunlight or aggressive gases act directly on the device and if it is ensured that the ambient conditions remain within the limit values specified in the data sheet at all times.

Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Operating mode The ultrasonic flow sensor is equipped with a flow pipe, two flow transmitters and an electronic circuit. A temperature sensor is mounted in the flow pipe to compensate the temperature effects.

A sensor error occurs when the ultrasonic path is interrupted (air bubbles in the system, connection to ultrasonic transducers interrupted).

Detailed error reports are available via Belimo Assistant 2 or BACnet, Modbus and MP-Bus.

Collective error report display

If the output signal is set to 0.5...10 V or 2...10 V and also to flow, a collective error report is displayed with a voltage of 0.3 V. This indicates a measurement error of the temperature sensor or flow sensor.

Functions Wires 6 and 7 are for the Modbus or BACnet communication. The physical bus address can be defined via the app.

Wire 5 can be configured with the app as an output signal 0...10 V (factory setting), 0.5...10 V, 2...10 V, user defined or as an MP-Bus communication. For the output signal, the flow or the fluid temperature can be selected.

The output signal can be scaled to achieve a better resolution. Factory setting is 10 V = FS (see diagram, example of output voltage characteristic curve 22PF-1UC).

Example output voltage characteristic 22PF-1UC

Patented glycol compensation Glycol changes the viscosity of the heat transfer fluid and as a result affects the measured volumetric flow. Without glycol compensation, volumetric flow measurements can show errors of as much as 30 percent. The patented automatic glycol compensation significantly reduces the degree of measurement error.

Selection of the fluid used:

- Water
- Propylene glycol
- Ethylene glycol
- Antifrogen L
- Antifrogen N
- DowCal 200
- DowCal 100

Determining the glycol concentration requires recurring temperature changes of min. 2 K within the flow sensor during operation. Installing the flow sensor in the temperature-variable part of the system is recommended to ensure these temperature changes.

Product features

Pressure drop The pressure drop across the flow sensor to achieve a desired flow q can be calculated using the theoretical K_{vs} value (see type overview) and the formula below.

Formula pressure drop

$$\Delta p = \left(\frac{q}{k_{vs\text{theor.}}} \right)^2 * 100 \text{ kPa}$$

Δp : kPa
 q : m³/h
 $k_{vs\text{theor.}}$: m³/h

Example pressure drop calculation

22PF-1UE (DN25)

$k_{vs\text{theor.}} = 13.2 \text{ m}^3/\text{h}$

$q = 1.7 \text{ m}^3/\text{h}$

$$\Delta p = \left(\frac{q}{k_{vs\text{theor.}}} \right)^2 * 100 \text{ kPa} = \left(\frac{1.7 \text{ m}^3/\text{h}}{13.2 \text{ m}^3/\text{h}} \right)^2 * 100 \text{ kPa} = 1.66 \text{ kPa}$$

Pressure drop diagram

Δp = Pressure drop
 q = Measured flow

Product features

Measuring accuracy Measuring accuracy for water (glycol 0% vol.):
 $\pm(2 + 0.017 \text{ FS}/q)\%$ of the measured value (q), but not more than $\pm 5\%$
 At a temperature range of 15...120 °C.

Measuring accuracy for water + glycol (glycol 0...60% vol.)
 $\pm 5\%$ (@ 20...100% FS)
 $\pm 0.01 \text{ FS}$, but not more than 30% of q (@ 0.8...20% FS)
 At a temperature range of -20...120°C.

Installation notes

Permissible installation orientation The sensor can be installed upright to horizontal. The sensor may not be installed in a hanging position.

Installation in return Installation in the return is recommended.

Installation notes

Inlet section A flow calming section or inlet section in the direction of the flow must be maintained in front of the flow sensor to achieve the specified measuring accuracy.

According to EN 1434-4:2022 (out-of-plane double 90° bends), an inlet section of 0x DN is applicable. In all other cases, EN 1434-6:2022, Annex A.4, recommends an inlet section of ≥5x DN. See also the Belimo application information on the inlet section according to EN 1434.

Water quality requirements The water quality requirements specified in VDI 2035 must be adhered to.

Servicing Sensors are maintenance-free.

Before any service work on the sensor is carried out, it is essential to isolate the sensor from the power supply (by unplugging the electrical cables if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).

The system must not be returned to service until the sensor has been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

Flow direction The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the flow rate will be measured incorrectly.

Avoiding cavitation To avoid cavitation, the system pressure at the outlet of the flow sensor must be a minimum of 1.0 bar [15 psi] at FS (maximum measurable flow) and temperatures up to 90°C [194°F]. At a temperature of 120°C [248°F] the system pressure at the outlet of the flow sensor must be at least 2.5 bar [37 psi].

Cleaning of pipes Before installing the flow sensor, the loop must be thoroughly rinsed to remove impurities.

Prevention of stresses The flow sensor must not be subjected to excessive stress caused by pipes or fittings.

Parts included

Description	Type
Insulation shell for thermal energy meter DN 15...25	A-22PEM-A01
Insulation shell for thermal energy meter DN 32...50	A-22PEM-A02
Insulation shell not included in Asia Pacific	

Accessories

Optional accessories	Description	Type
	Pipe connector for EPIV / Energy valve with external thread DN 15 Rp 1/2", G 3/4"	ZREV15F
	Insulation shell for thermal energy meter DN 15...25	A-22PEM-A01
	Pipe connector for EPIV / Energy valve with external thread DN 20 Rp 3/4", G 1"	ZREV20F
	Pipe connector for EPIV / Energy valve with external thread DN 25 Rp 1", G 1 1/4"	ZREV25F
	Pipe connector for EPIV / Energy valve with external thread DN 32 Rp 1 1/4", G 1 1/2"	ZREV32F
	Insulation shell for thermal energy meter DN 32...50	A-22PEM-A02
	Pipe connector for EPIV / Energy valve with external thread DN 40 Rp 1 1/2", G 2"	ZREV40F

Accessories

	Description	Type
	Pipe connector for EPIV / Energy valve with external thread DN 50 Rp 2", G 2 1/2"	ZREV50F
Tools	Description	Type
	Service tool for wired and wireless setup, on-site operation and troubleshooting.	Belimo Assistant 2
	Belimo Assistant Link Bluetooth and USB to NFC and MP-Bus converter for configurable and communicative devices	LINK.10
	Connecting cable 5 m, A: RJ11 6/4 LINK.10, B: free wire end for connection to MP/PP terminal	ZK2-GEN

Service

Using Belimo Assistant 2, device parameters can be modified. Belimo Assistant 2 can operate on a smartphone, tablet or PC. The available connection options vary depending on the hardware on which Belimo Assistant 2 is installed.

For more information about Belimo Assistant 2, refer to the Quick Guide – Belimo Assistant 2.

Wireless connection Belimo devices marked with the NFC logo can be accessed either directly with an NFC-capable smartphone or with a Bluetooth-capable smartphone connected to Belimo Assistant Link.

Requirement:

- NFC- or Bluetooth-capable smartphone or tablet
- Belimo Assistant 2 (Google Play and Apple App Store)

Align the NFC-capable smartphone or Belimo Assistant Link with the device's NFC logo so that both NFC antennas are superposed.

Service

Wired connection Belimo devices can be accessed by connecting Belimo Assistant Link to the USB port on a PC or laptop and to the service socket or MP-Bus wire on the device.

Belimo Assistant 2 acts as MP client. Therefore, no other MP client shall be connected to the device.

Wiring diagram

Supply from isolating transformer.

The wiring of the line for BACnet MS/TP / Modbus RTU is to be carried out in accordance with applicable RS-485 regulations.

Modbus / BACnet: Supply and communication are not galvanically isolated. Connect earth signal of the devices with one another.

Sensor connection: An additional sensor can optionally be connected to the flow sensor. This can be an active sensor with output DC 0...10 V (max. DC 0...32 V with resolution 30 mV) or a switching contact (switching current min. 16 mA @ 24 V). Thus the analogue signal of the sensor can be easily digitised with the flow sensor and transferred to the corresponding bus system.

Analogue output: An analogue output (wire 5) is available on the flow sensor. It can be selected as 0...10 V, 0.5...10 V, 2...10 V or user defined. For example, the flow rate or the temperature of the temperature sensor (Pt1000 - EN 60751, 2-wire technology) can be output as an analogue value.

Wire colours:

- 1 = black
- 2 = red
- 3 = white
- 5 = orange
- 6 = pink
- 7 = grey

Functions:

- 1 = Com
- 2 = AC/DC 24 V
- 3 = Sensor (optional)
- 5 = 0...10 V, MP-Bus
- C1 = D- (wire 6)
- C2 = D+ (wire 7)
